**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3-7 and 9-12 are rejected under 35 U.S.C. 102(b) as being anticipated by applicants admission of the prior art or the article to Min Lou et al.

Fig. 1 of the instant application and the EAGE article to Min Lou et al each disclose a system for determining interval anelliptical or anisotropic parameters. The system includes determining NMO velocities and effective anelliptical or anisotropic parameters from seismic data traces, determining interval velocities from the NMO velocities and inverting the NMO velocities, effective anelliptical or anisotropic parameters and interval velocities to obtain the interval anelliptical parameters using the Dix equation. Claims 1 and 7 are so anticipated

Dependent claims 3-6 and 9-12 are further disclosed by the prior art disclosed above.

***Allowable Subject Matter***

3. Claims 2 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3662

4. The following is a statement of reasons for the indication of allowable subject matter:

Claims 2 and 9 include the limitation that the inversion comprises damped least squares (DLS) inversion. DLS inversion provides greater stability.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
